CP titanium Grade 4 — commercially pure titanium

The strongest unalloyed titanium: 80 ksi minimum tensile, with the least ductility of the four.

Schematic

Designation

Item	Value
Designation	CP titanium Grade 4
Class	Titanium
Type	commercially pure titanium

Properties

Property	Value	Source
Type	Unalloyed titanium, annealed; excellent formability, readily welded or brazed	MIL-HDBK-5J, par. 5.2.1.0
MIL-HDBK-5J name	CP-1 under AMS-T-9046, equal in strength to ASTM Grade 4	MIL-HDBK-5J, Table 5.2.1.0(b); ASTM B265 grade strengths
Specification	AMS 4901 and AMS-T-9046 (CP-1)	MIL-HDBK-5J, Table 5.2.1.0(a)
Oxygen limit	0.40 % max (interstitials set the grade)	ASTM B265-10 Table 2 (Grade 4)
Full anneal	1,000 to 1,300 °F for 10 to 30 minutes	MIL-HDBK-5J, par. 5.2.1.0
Stress relief	900 to 1,000 °F for 30 minutes	MIL-HDBK-5J, par. 5.2.1.0
Density	0.163 lb/in³ (about 4.51 g/cm³, converted)	MIL-HDBK-5J, Table 5.2.1.0(b)

Design allowables — CP titanium Grade 4 sheet, strip and plate, annealed

Property	S basis	Unit
Ftu, L and LT	80	ksi
Fty, L and LT	70	ksi
Elongation, L and LT (0.025 in and over)	15	%
E	15.5	10^3 ksi
G	6.5	10^3 ksi
Density	0.163	lb/in³

The handbook labels the four sheet strength levels CP-4 to CP-1, with minimum Ftu of 35, 50, 65 and 80 ksi; this page assigns them to Grades 1 to 4 by strength, as ASTM B265 does. Check the spec on your certificate: the handbook yield figures are the AMS and MIL-T-9046 minimums and may differ from ASTM B265 minimums.

Notes

- **Annealed values.** Forming and heat change them.
- **Not a substitute for an alloy grade** or for aluminum; the drawing names the grade.
